

Candidiasis Report

Sample Patient
DOB: 00/00/0000

REQUISITION: 0000000
COLLECTION DATE: 00/00/0000
RUN DATE: 0/00/0000

Sample Doctor, M.D.
City, State, 00000

| Candida Albicans | | |
|------------------|-----|-----|
| IgG | IgA | IgM |
| 227 | 197 | 90 |

Values are reported in MONA (Multiple of Normal Activity) Units

Normal - MONA Unit \leq 100

Abnormal - MONA Unit $>$ 100

CANDIDA ALBICANS TEST INTERPRETATION

- ▶ Increased IgM antibodies may indicate recent Candida overgrowth.
- ▶ Increased IgA antibodies suggest mucosal overgrowth. This overgrowth could be of digestive, respiratory, nasal, oral, genital, or urinary tract origin.
- ▶ Increased levels of IgG antibodies may suggest chronic overgrowth of Candida.
- ▶ Increases in IgG and IgM may suggest a recent or recurrent overgrowth of Candida.
- ▶ Increased levels of IgG and IgM antibodies with elevated levels of Candida Immune Complex may be indicative of an ongoing overgrowth of Candida .

NOTE: Test findings should be correlated with the patients' symptoms and immune status since antibody production may be diminished in an immunocompromised individual.
